 sanitizer

## safeHands Alcohol-Free Hand Sanitizer

Unlike other sanitizers which only kill germs upon initial use, safeHands is designed to kill on contact and offers extended protection against bacteria and germs. The persistent “microbe killing power” of safeHands is attributed to its unique, patented, antimicrobial technology which uses Benzalkonium Chloride for its proven ability to kill a broad-spectrum of pathogens. Combining the effectiveness of BZK with additional proprietary ingredients that work synergistically to achieve of a comprehensive barrier, safeHands keeps hands moisturized and prevent dryness by working with the natural oils of the skin without sacrificing efficacy.

A next generation hand sanitizer safe for even the littlest hands.

- Kills 99.9% of most common germs
